Date	04 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (A Comprehensive Measure of Well-Being)

The Human Development Index (HDI) is one of the most important indicators used to measure a country's overall development based on **Life Expectancy, Education, and Gross National Income (GNI) per capita**. However, predicting HDI accurately is difficult because it requires analyzing multiple socio-economic indicators and performing complex calculations. A well-defined customer problem statement helps identify the challenges faced by policymakers, researchers, and the general public. It also helps the team design an effective machine learning-based HDI prediction system that supports better decision-making and development planning.

Example:

I am	I'm trying to	But	Because	Which makes me feel
a Policy Analyst	predict the Human Development Index (HDI) of a country accurately	existing reports only provide historical data	there is no AI-based real-time prediction system	limited in making quick policy decisions
a Researcher	analyze the impact of health, education, and income on HDI	large datasets are difficult to process	data cleaning and manual calculations take a lot of time	frustrated and inefficient
a Student or General User	compare the development level of different countries	existing dashboards are difficult to understand	they do not provide interactive HDI prediction	confused and less informed

Project Initialization and Planning Phase

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1: Policy Analyst	A government policy analyst	Predict the Human Development Index (HDI) of a country	Current reports only provide historical data.	There is no AI-based system for real-time HDI prediction.	Limited in making quick policy decisions.
PS-2: Researcher	A researcher or student	Analyze the relationship between health, education, and income on HDI.	Working with large datasets is complex.	Data requires cleaning and manual calculations.	Frustrated and finds the process time-consuming.
PS-3: General User	A citizen or learner	Compare the development level of different countries.	Existing dashboards are difficult to understand.	They do not provide interactive predictions or simple visual insights.	Confused and less informed.
