Maximum Marks	3 Marks

Project Executable Files

This section includes all the executable and supporting files required for the HDI Predictor application. The project files are organized to enable the evaluator to install, run, and verify the Machine Learning model and Flask web application using the provided source code, dependencies, and execution instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video / Walkthrough	Yes

Step 2: File / Folder Structure

The following section presents the file and folder structure of the **HDI Predictor** application, highlighting the organization of the Flask application, Machine Learning model, datasets, templates, and supporting resources.

HDI-Predictor/

```

|
|  ├── 404.html
|  ├── 500.html
|
|  └── tests/
|      ├── test_app.py
|      └── test_model.py
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Runs Locally)
Login Credentials (Demo)	Username: admin Password: admin123
Platform / Hosting Provider	Local Flask Server
Repository Link	GitHub Repository
Demo Video Link	Submitted Separately

Step 4: Run Instructions

The following instructions explain how to run the **HDI Predictor** application locally and generate Human Development Index predictions using the trained Machine Learning model.

Pre-requisites

- Python 3.10 or above
- pip
- Internet Browser

Steps

1. Download or clone the HDI Predictor project.
2. Open the project folder in VS Code or Terminal.
3. Install dependencies using:

```
pip install -r requirements.txt
```

4. Train the Machine Learning model:

```
python train_model.py
```

5. Start the Flask application:

python app.py

6. Open the browser and visit:

http://127.0.0.1:5000

7. Login using the demo credentials and enter the country development indicators to predict the Human Development Index.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application is currently not deployed online	Can be deployed using Render or PythonAnywhere
2	Prediction accuracy depends on dataset quality	Use updated UNDP datasets for better results
3	Internet connection is required to download the latest dataset during training	Existing dataset or synthetic dataset is used if download fails
